In the following circuit, where source voltage is $V_s = 110$ V, current and active power measurements were taken:

- $I_2 = 2$ A;
- $I_3 = 4$ A;
- $P_3 = 300$ W (measured in RL branch)

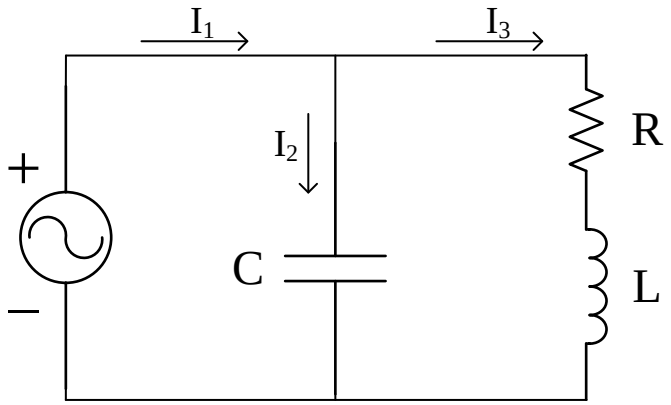

Figura 1: Circuit

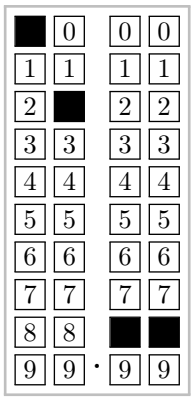
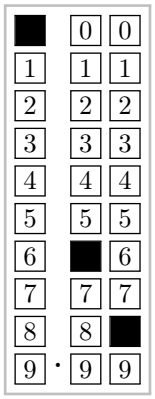
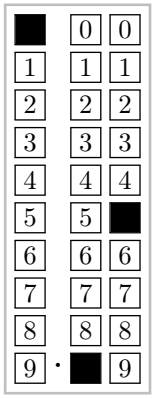
Question 1 Find the magnitude for current I_1, in amperes.



Question 2 Find the power factor in the RL branch (leading or lagging).



Question 3 Find the power factor as seen from the voltage source (leading or lagging).



Question 4 Describe the procedure and assumptions that should be followed to find the capacitor that adjusts the power factor to a specific value.
